

ABB NGPS-13C 3AUA0000042489

ABB Drive Power Supply Kit

Product scope

- Uses ABB order code 3AUA0000042489 for exact service-part identification.
- Provides the auxiliary power path required by the documented drive hardware.
- Must be matched to the target drive and connector arrangement before installation.
- Requires complete isolation and DC-bus discharge during service.

Manufacturer source

ABB drive service documentation and spare-parts record for NGPS-13C, order code 3AUA0000042489.

The enclosed record retains only manufacturer-supported identity, function, operating principle, application and replacement boundaries for this product.

ABB NGPS-13C 3AUA0000042489

ABB Drive Power Supply Kit

Manufacturer-source product record

This record consolidates exact-model facts from the manufacturer references listed below. It is included to identify the ordering configuration before the retained source pages.

ABB order code	3AUA0000042489
Kit designation	NGPS-13C
Product class	Drive power supply kit
Application family	ABB industrial drive service hardware
Ordering requirement	Use the complete type and order code

Official references

- ABB drive service documentation and spare-parts record for NGPS-13C, order code 3AUA0000042489.
- Official ABB order-code identity retained for product matching.

Only the exact configuration shown above is represented. Adjacent model variants, optional assemblies and system accessories are not treated as part of this ordering identity.

Function, operating principle and application

The notes below explain how this product is used and how its documented signal, power or control path operates. They remain limited to the manufacturer evidence for this model.

Purpose

The kit provides the specified auxiliary power-supply function within its documented ABB drive service application.

Operating role

It converts and distributes the internal auxiliary supply required by the connected drive electronics. Final voltage use and connector assignment are determined by the target drive hardware.

Service application

NGPS-13C is selected as an exact service part rather than a generic external power supply. The full 3AUA0000042489 code is the controlling procurement identifier.

Installation

The drive must be isolated and its DC bus fully discharged before the kit is handled. Reconnect each harness in the original orientation and verify protective-earth continuity.

Compatibility boundary

Do not substitute a visually similar NGPS assembly. Confirm the target drive type, hardware revision, connector keying and complete ABB order code.
