

VERIFIED PRODUCT REFERENCE

Emerson EPRO PR6423/004-111 CON041 8 mm Eddy Current Sensor and DIN-Rail Converter

Emerson EPRO PR6423/004-111 CON041 combines a PR6423 eddy-current sensor with a CON041 signal converter. The exact suffix defines M10 x 1 mounting, unarmoured construction and a 5 m cable termination.

Manufacturer Emerson	Product family EPRO PR6423 Eddy Current Measurement	Exact model PR6423/004-111 CON041
-------------------------	--	--------------------------------------

Officially documented specifications

Sensor family	PR6423
Converter	CON041
Probe thread	M10 x 1
Cable armour	Unarmoured
Sleeve configuration	65 mm sleeve
Cable length	5 m
Cable termination	Open end
Nominal sensitivity	8 V/mm
Measuring range	2 mm
Minimum shaft diameter	25 mm
Converter mounting	DIN rail mounting
Converter weight	60 g
Sensor protection	IP66
Measurement principle	Eddy current, non-contact

INSTALLATION AND PROCUREMENT REFERENCE

PR6423/004-111 CON041 application guidance

PR6423/004-111 CON041 combines the Emerson EPRO PR6423 sensor with its CON041 signal converter. This order string specifies M10 x 1 mounting, 65 mm sleeve, unarmoured construction and a 5 m cable ending in open end.

The matched chain measures non-contact shaft displacement for vibration or position monitoring on rotating machinery. Nominal sensitivity is 8 V/mm, with a documented measuring range of 2 mm and minimum shaft diameter of 25 mm.

Accuracy depends on target material, probe gap, cable length, converter type and channel polarity. The sensor and converter must be treated as one calibrated measurement path rather than mixed with visually similar suffixes.

High-risk technical note

PR6423/004-111 CON041 calibration depends on the complete probe, cable and CON041 chain; do not interchange suffixes or reset gap without preserving the machine trip plan.
