

51402797-200

Honeywell Industrial Control Spare Assembly

Verified identification

Manufacturer	Honeywell
Exact part number	51402797-200
Document scope	Identification and sourcing control only

Function and role

This Apter Power identification sheet preserves the exact Honeywell order number used for procurement and installed-base matching. It does not add processor, memory, voltage, temperature, or compatibility claims that cannot be traced to a public Honeywell record.

Working principle

Selection is controlled by documentary comparison: the complete nameplate, board markings, bracket or carrier details, host-system records, and installed connections must agree before a replacement is accepted.

Application

Use the document to prepare an RFQ, collect site evidence, and keep the requested identity separate from visually similar Honeywell assemblies.

Selection and replacement note

Provide clear label photographs and the host-system reference. Do not substitute another 5140-series number without written engineering confirmation.

Manufacturer-source basis

Public manufacturer documentation for this exact order number was not located. This sheet intentionally limits technical content to exact identification and quotation controls.

Request a fast quote

Include the complete product title, required quantity, destination, and clear nameplate photographs.
