

SK-U1-PS1-H1

ABB Power Supply Board

Verified identification

Manufacturer	ABB
Exact part number	SK-U1-PS1-H1
Recorded product class	Power Supply Board
Document scope	Identification and replacement review

Function and role

The page identifies SK-U1-PS1-H1 as an ABB power-supply board for installed-base service. This PDF does not extend that identity into undocumented output ratings or system compatibility.

Working principle

Replacement acceptance must be based on the full code, board revision, connector arrangement, mounting points, and the host drive documentation available at the site.

Application

Use this sheet to structure a quotation request and to distinguish the requested board from similar ABB drive power assemblies.

Selection and replacement note

Photograph both sides of the installed board and its label. Confirm the host drive type and revision before energizing a replacement.

Manufacturer-source basis

No exact public ABB technical document was located for this complete code. Unverified voltage, current, efficiency, environmental, and compatibility values are deliberately omitted.

Request a fast quote

Include the complete product title, required quantity, destination, and clear nameplate photographs.
