Section 1 Licensing

Introduction

The licensing for Freelance V9.2 SP1 is based on the existing I/O based licensing model.

Freelance system 9.2 supports usage of unlimited number of OPC signals when connected to third party OPC server.

Third party OPC integration is free from version 9.2.

Control Builder F

Control Builder F is the programming tool for AC 800F, AC 700F and the classic rack-based controllers like DCP02 and DCP10. The engineering of the operating console is part of Control Builder F.

The following Control Builder F packages are available:

- Control Builder F **Standard**
- Control Builder F **Professional**

All Control Builder F versions support the following functions:

- Configuration and commissioning of user programs
- IEC 61131-3 programming (FBD, IL, LD, ST, SFC)
- Graphical hardware configuration
- Integral fieldbus configuration for Profibus and FOUNDATION Fieldbus
- IEC 61131-3 data types and user-defined (structured) data types
- Project-wide variables and function block lists
